

# Souda

---

Open-source Laravel + Inertia React SaaS starter kit focused on a clean lite baseline:

- single database multi-tenancy
- one tenant per user
- plain authenticated app routes ([/dashboard](#), [/tasks](#), [/billing](#))
- Stripe billing with plan/price management

This repository is the **Lite** edition.

## Lite vs Pro

Pro-only features:

- multi-database tenancy
- workspaces/teams/invitations
- seat-based pricing
- free tier
- More information: <https://saasforgekit.com/>
- Documentation: <https://saasforgekit.com/documentation>
- Demo: <https://demo.saasforgekit.com>

## Tech Stack

- PHP 8.4+
- Laravel 13
- Inertia.js v2 + React + TypeScript
- Tailwind CSS v4
- Laravel Cashier (Stripe)
- Stancl Tenancy (multi-tenancy DB mode)
- Pest

## Quick Start

### 1) Prerequisites

- PHP 8.4+
- Composer
- Node.js 20+ and npm
- SQLite (default) or MySQL/PostgreSQL

### 2) Install dependencies and bootstrap app

```
composer install
npm install
cp .env.example .env
php artisan key:generate
```

### 3) Configure database

Default `.env.example` uses SQLite:

```
DB_CONNECTION=sqlite
```

Or switch `DB_*` values in `.env` for MySQL/PostgreSQL.

### 4) Run migrations and seed admin

```
php artisan migrate
php artisan db:seed --class=AdminRoleSeeder
```

Admin seed credentials:

- email: `admin@admin.com`
- password: `password`

### 5) Start development

Run backend + queue + logs + Vite together:

```
composer run dev
```

Or run only Vite in another terminal if you already run PHP server separately:

```
npm run dev
```

### 6) Build and test

```
npm run build
php artisan test
```

## Stripe Setup

Set in `.env`:

```
STRIPE_KEY=  
STRIPE_SECRET=  
STRIPE_WEBHOOK_SECRET=
```

For local webhooks:

```
stripe listen --forward-to http://127.0.0.1:8000/stripe/webhook
```
